

Therapeutic Effects of Electrical Vestibular Stimulation (EVS) on Balance and Gait

NCT06846047

Status	RECRUITING
Phase	Not Applicable
Sponsor	Neursantys Inc
Enrollment	500 participants

Key Eligibility Criteria

Inclusion (2)

- Able to complete balance assessments such as standing with feet together/eyes open and feet together/eyes closed, both for at least 1 minute at a time, with no more than 1 minute rest required between tests.
- Able to complete gait assessment tests such as walking up to 200m on a flat surface without assistance.

Exclusion (3)

- Participants must not be using a pacemaker, cochlear implant, or any other implanted electronic device.
- Participants must be free from any diagnosed neurological or musculoskeletal injuries and/or disorders other than those explicitly being investigated (i.e., vertigo, multiple sclerosis, Parkinson's disease, concussion).
- Participants must have the mental capacity to provide consent and perform tasks required by the experiment.
