

# Precision Antiplatelet Therapy Guided by Platelet Aggregation Function in Patients With Acute Ischemic STROKE

NCT06853535

---

Status	RECRUITING
Phase	Phase 3
Sponsor	Sichuan Provincial People's Hospital
Enrollment	5,138 participants

## Key Eligibility Criteria

---

### Inclusion (7)

- Age ≥ 18 years old.
  - Patients diagnosed with acute non-disabling ischaemic stroke or transient ischaemic attack (TIA) with moderate to high stroke risk in accordance with the WHO diagnostic criteria, defined as follows:
    - Acute non-disabling ischaemic stroke: NIHSS score ≥ 5 at enrollment;
    - TIA with moderate to high stroke risk: ABCD, score ≥ 4.
  - Time from symptom onset ≤ 48 hours. (Definition of symptom onset time: the interval from the last time the patient was observed in a normal state to the time of co-administration of clopidogrel 300 mg and aspirin 100 mg.)
- ... and 2 more (see full listing online)

### Exclusion (19)

- Imaging examinations suggestive of hemorrhagic stroke, hemorrhagic transformation, or other pathological cerebral disorders, such as vascular malformation, tumor, abscess, or other common non-ischemic cerebral diseases (e.g., multiple sclerosis).
  - Minor stroke/TIA induced by angioplasty or vascular surgery.
  - Routine electrocardiogram (ECG) suggestive of atrial fibrillation (AF), or physical examination findings of typical AF signs including completely irregular cardiac rhythm, variable intensity of the first heart sound, and pulse deficit.
  - Having definite indications for anticoagulant therapy (suspected cardiogenic embolism, e.g., atrial fibrillation, known artificial heart valve, suspected endocarditis, etc.).
  - Patients who have received intravenous thrombolysis, intra-arterial thrombolysis, mechanical thrombectomy, or any revascularization surgery after the current onset, or plan to receive such procedures within 90 days.
- ... and 14 more (see full listing online)
