

Human Liver ORganoids as a Model to Study the Development of Non-Alcoholic SteatOhepatitis (NASH)

NCT06856252

Status	RECRUITING
Phase	Not Applicable
Sponsor	Fondazione IRCCS Ca' Granda, Ospedale Maggiore Policlinico
Enrollment	60 participants

Key Eligibility Criteria

Inclusion (12)

- Adult patients who have given consent to participate in the study and listed for the following procedures will be included:
 - liver biopsy for suspected non-alcoholic steatohepatitis (NASH) at the time of diagnosis;
 - liver resection for hepatocarcinoma or other liver lesions (including secondaries from other neoplasms and benign focal lesions, which will allow obtaining healthy starting liver tissue);
 - post-transplant healthy liver biopsies;
 - cholecystectomies.
- ... and 7 more (see full listing online)
