

Efficacy and Safety Study of Endovascular Treatment of Asymptomatic Carotid Artery Stenosis

NCT06899399

Status	RECRUITING
Phase	Not Applicable
Sponsor	Beijing Tiantan Hospital
Enrollment	982 participants

Key Eligibility Criteria

Inclusion (7)

- Age 40-80 years
- Severe asymptomatic internal carotid artery stenosis (70-99%) confirmed by ultrasound/CTA/DSA
- Contralateral ICA stenosis \leq 70%
- No TIA/stroke related to target lesion in past 6 months
- Declined carotid endarterectomy
- ... and 2 more (see full listing online)

Exclusion (29)

- symptomatic internal carotid artery stenosis in the past 6 months
- Spontaneous intracranial hemorrhage in nearly one year
- Patients with larger intracranial aneurysms (diameter \geq 5 mm) who cannot undergo prior or concurrent treatment
- Chronic occlusion without obvious symptoms of cerebral ischemic attack
- Patients with transient or permanent neurological deficit resulting from Neurological deficits mimicking TIA/stroke from TIA or stroke
- ... and 24 more (see full listing online)

Locations (1 total)
