

Complications Related to the Anaesthesia During Airway Endoscopy in Children With Tracheostomy.

NCT06906263

Status RECRUITING
Sponsor Karolinska Institutet
Enrollment 80 participants

Key Eligibility Criteria

Inclusion (3)

- All patients:
- under the age of 18 years with tracheostomy undergoing surveillance airway endoscopy approved for anesthesia
- will be included within the time frame of the study (3 years). Patients may be included multiple times during the study period.

Exclusion (2)

- Patients will be excluded from the study if the airway endoscopy is a non-elective emergency procedure.
- Patients undergoing concurrent major surgery during the same session will be included in the study but excluded from analysis of postoperative symptoms (secondary outcome measure). This is because postoperative well-being cannot be reliably attributed to the airway endoscopy alone when major surgery is performed simultaneously.
