

# A Clinical Trial Comparing Overnight and 2x/Day for 30-minutes Use of the Emanate Perio PODS Post-SRP

NCT06914596

---

Status	RECRUITING
Phase	Not Applicable
Sponsor	McGuire Institute
Enrollment	111 participants

## Key Eligibility Criteria

---

### Inclusion (9)

- Subjects will have read, understood, and signed an institutional review board (IRB) approved Informed Consent Form (ICF).
- Subjects 22 to 75 years of age.
- Generalized Stage III periodontitis with at least 8 teeth having interproximal clinical attachment level of e3 mm and a probing pocket depth of e5 mm and d7mm, distributed between the mandible and the maxilla, with at least 2 qualifying interproximal sites in each arch. Localized and not more than 6 sites with a PD of 8 mm is acceptable as long as the tooth with 8 mm pocket depth is not clinically diagnosed as hopeless tooth with suppuration or mobility Grade 3 or greater.<sup>5-7</sup>
- Subjects have a minimum of 24 natural teeth with a minimum of 2 natural teeth per quadrant excluding third molars.
- All supragingival accretions can be removed from below the height of contour of the tooth crown to allow for a comprehensive periodontal evaluation and accurate intraoral digital scan of both arches at screening.

... and 4 more (see full listing online)

### Exclusion (17)

- Periodontal surgery, implant placement or SRP within 12 months prior to screening or a cleaning/prophylaxis six months prior to screening.
- Presence of fixed or removable (e.g. Invisalign) orthodontic appliances.
- Subject with an underlying medical condition which requires antibiotic prophylaxis prior to dental treatment.
- Subjects with vesicobullous processes or other similar chronic oral lesions / conditions resulting in gingival irritation, discomfort/pain, or erosions.
- Subjects with soft or hard tissue tumor(s) of oral cavity.

... and 12 more (see full listing online)
