

The Efficacy of High-frequency Short-time Spinal Cord Stimulation in the Treatment of Herpes Zoster-associated Neuralgia

NCT06942806

Status RECRUITING
Sponsor Li Zhao
Enrollment 74 participants

Key Eligibility Criteria

Inclusion (4)

- Patients with inadequate response to non-surgical treatments such as pharmacotherapy;
- Patients with major organ dysfunction intolerant to drug therapy;
- Patients with systemic comorbidities (e.g., hypertension, diabetes mellitus);
- Patients with moderate to severe pain intensity (Numerical Rating Scale [NRS] score ≥ 4).

Exclusion (6)

- Patients with severe psychiatric disorders;
- Patients with severe local or systemic infections at the puncture site;
- Patients with severe coagulopathies (platelet count $< 80 \times 10^9/L$ during puncture) or those requiring uninterrupted anticoagulation therapy without bridging protocol;
- Patients with end-stage organ failure who cannot maintain prone positioning or tolerate the procedure;
- Patients with severe spinal stenosis, vertebral ankylosis, or scoliosis;
- ... and 1 more (see full listing online)
