

Acostream Use in Patients With High Risk and Intermediate-risk Acute Pulmonary Embolism

NCT06946732

Status	RECRUITING
Phase	Not Applicable
Sponsor	RenJi Hospital
Enrollment	127 participants

Key Eligibility Criteria

Inclusion (5)

- Aged 18-85
- Clinical symptoms and presentation consistent with pulmonary embolism (PE).
- PE symptoms duration \leq 14 days.
- High risk PE patients with absolute contraindications to systemic thrombolysis or its failure (refractory circulatory collapse) not eligible for surgical embolectomy.
- Intermediate-high risk PE patients with right ventricle dysfunction (right ventricle/ left ventricle \geq 0.9) confirmed by computed tomography pulmonary angiography or transthoracic echocardiography.

Exclusion (7)

- Pregnancy.
- Refusal to sign the informed consent form.
- Presence of intracardiac thrombus.
- Presence of chronic left heart failure with an ejection fraction lower than 30% Diagnosed thrombophilia.
- History of severe or chronic pulmonary hypertension.
- ... and 2 more (see full listing online)
