

# The Effect of Virtual Reality on Women Undergoing Endometrial Biopsy

NCT06961097

---

Status	RECRUITING
Phase	Not Applicable
Sponsor	Ondokuz Mayıs University
Enrollment	64 participants

## Plain Language Summary

---

This study is looking at whether virtual reality (VR) can reduce pain and anxiety in women undergoing a procedure called endometrial biopsy (a brief in-office procedure where a small sample is taken from the lining of the uterus). The experience can be uncomfortable, and researchers want to test if VR can serve as a distraction and pain management tool.

**\*\*You may be eligible if...\*\***

- You are 18 or older
- You speak and understand Turkish
- You are willing to participate in the study

**\*\*You may NOT be eligible if...\*\***

- You do not wish to participate
- You do not speak or understand Turkish

Talk to your doctor to see if this trial is right for you.

## Key Eligibility Criteria

---

### Inclusion (3)

- Being over 18 years old
- Speaking and understanding Turkish
- Being willing to participate in the research

### Exclusion (1)

- Not volunteering to participate in research \* Not speaking or understanding Turkish

## Locations (1 total)

---

Samsun University, Samsun, Turkey (Türkiye)
