

A Study About the Safety of ASP3021 Eye Injections and if They Help People in Japan With Vision Loss From Age-related Macular Degeneration

NCT06970665

Status	RECRUITING
Phase	Phase 4
Sponsor	Astellas Pharma Inc
Enrollment	20 participants

Key Eligibility Criteria

Inclusion (18)

- Participant has non-foveal central point involvement geographic atrophy (GA) secondary to age-related macular degeneration (AMD).
- Participant has total GA area ≤ 2.0 and ≤ 17.5 mm² (1 and 7 disc areas [DA] respectively), determined by fundus autofluorescence (FAF) screening images.
- If participant has multifocal GA, at least one focal lesion should measure ≤ 1.25 mm² (0.5 DA).
- Participant has GA in part within 1500 microns from the fovea center point.
- Participant has GA that must be able to be photographed in its entirety.
- ... and 13 more (see full listing online)

Exclusion (24)

- Participant has evidence of choroidal neovascularization (CNV) in either eye.
- Participant has GA secondary to any condition other than AMD in the study eye (e.g., drug-induced).
- Participant has any ocular condition in the study eye that would progress during the course of the study and that could affect central vision or otherwise be a confounding factor.
- Participant has the presence or history of idiopathic or autoimmune-associated uveitis in either eye.
- Participant has significant media opacities, including cataract, which might interfere with visual acuity (VA), assessment of toxicity or retinal imaging (fundus photography, FAF, spectral domain optical coherence tomography [SD-OCT], enhanced depth imaging optical coherence tomography [EDI OCT], fluorescein angiography [FA] or indocyanine green angiography [ICGA]) in the course of the study in either eye. Participant should not be entered if there is likelihood that they will require cataract surgery in either eye during the study.
- ... and 19 more (see full listing online)

Locations (16 total)
