

# Assessing the Effectiveness of Heat Adaptation Digital Messages From Primary Care Providers to Their Patients on the Change in Behaviour for Heatwave-related Preparedness

NCT07024628

---

<b>Status</b>	RECRUITING
<b>Phase</b>	Not Applicable
<b>Sponsor</b>	Hopital Montfort
<b>Enrollment</b>	20,000 participants

## Key Eligibility Criteria

---

### Inclusion (16)

- Primary Care Patients:
  - Adults (18 years and older)
  - Patients must be registered with a participating PCP.
  - They must have had at least one visit with their PCP in the past two years to ensure active engagement.
  - Participants must have an active email, cell phone or messaging service (SMS) to receive Heat Smart digital messages.
- ... and 11 more (see full listing online)

### Exclusion (1)

- Patients who do not read French or English will be excluded from the study as they will not be able to give informed consent or to fill out the surveys. Patients who do not have an email address or text messaging service will be excluded for the same reason. Minors, patients with dementia and people who cannot read and write in English or French will not be eligible because the automated approach to surveying patients makes it impractical to properly obtain their consent.
