

# Digital Out-of-hospital Management on Clinical Outcomes in Patients With Early Cardiogenic Shock

NCT07085221

---

Status	RECRUITING
Phase	Not Applicable
Sponsor	Renmin Hospital of Wuhan University
Enrollment	472 participants

## Key Eligibility Criteria

---

### Inclusion (9)

- Age e 18 years old;
- The patient meets the diagnosis of early-stage cardiogenic shock, with SCAI stage A, B, or C during hospitalization; (1) SCAI stage A:
  - Without signs of shock and meeting one of the following criteria:
  - Combined with extensive myocardial infarction, diagnosed as widespread anterior wall myocardial infarction based on ST-segment elevation in ECG leads (V1-V5, aVL, I leads), inferior wall combined with right ventricular (II, III, aVF, V3R-V5R leads) and/or posterior wall myocardial infarction (V7-V9 leads), or recurrent myocardial infarction within 28 days.
  - Concurrent acute heart failure or acute exacerbation of chronic heart failure. (2) SCAI stage B-C (meeting the following conditions)

... and 4 more (see full listing online)

### Exclusion (15)

- Unable to use a smartphone for out-of-hospital management despite training
- The reasons for discharge were treatment withdrawal and transfer to another hospital for continued therapy
- Previous or current hospital admission due to cardiac arrest
- Refractory cardiogenic shock
- Refractory Heart Failure (ACC/AHA guidelines Stage D heart Failure)

... and 10 more (see full listing online)
