

Ovarian Stimulation Outcomes During a GnRH Antagonist Protocol for In-vitro Fertilization When Comparing Trigger Day Decision by Physicians Versus an Artificial Intelligence-based Algorithm.

NCT07110285

| | |
|------------|------------------|
| Status | RECRUITING |
| Phase | Not Applicable |
| Sponsor | FertilAI |
| Enrollment | 180 participants |

Key Eligibility Criteria

Inclusion (1)

- All patients undergoing an ovarian stimulation cycle utilizing the GnRH antagonist protocol for oocyte cryopreservation or for fertilization via intracytoplasmic sperm injection (ICSI) (any treatment where oocytes are denuded and maturity may be assessed).

Exclusion (1)

- Loss to follow-up, patient retracts consent to participate
