

Initial Standardized Global Review in Axial Spondyloarthritis

NCT07141017

Status	RECRUITING
Phase	Not Applicable
Sponsor	Association de Recherche Clinique en Rhumatologie
Enrollment	154 participants

Key Eligibility Criteria

Inclusion (1)

- Adults (but age ≤ 80 years) with a diagnosis of axial spondyloarthritis determined by the treating rheumatologist within the 12 months preceding the baseline visit, who have completed the informed consent and have the ability to complete all study activities.

Exclusion (2)

- Patients who have already received a specific (or plan to receive in the coming 12 months) and dedicated program/global evaluation including education on the disease or treatments.
- Patients with any physical or mental condition that may affect understanding of the intervention or adherence to treatment (e.g. major depression or substance/alcohol use - might have impact on the outcomes of interest in the study).
