

Biolizin for Improving Functional Poor Appetite in Children Aged 6 to 36 Months (CTBE2502)

NCT07153549

| | |
|------------|--|
| Status | RECRUITING |
| Phase | Not Applicable |
| Sponsor | Haiphong University of Medicine and Pharmacy |
| Enrollment | 110 participants |

Key Eligibility Criteria

Inclusion (9)

- Age 6 to 36 months at screening.
- Functional poor appetite for e2 weeks with at least one of the following:
- Clearly reduced intake versus usual (lower amount of food and/or fewer meals per day);
- Prolonged meal duration (>30 minutes per meal);
- Refusal or avoidance of familiar foods previously accepted;
- ... and 4 more (see full listing online)

Exclusion (12)

- Ongoing acute or chronic illnesses that can affect intake or absorption, including but not limited to:
- Acute infections (e.g., tonsillitis, pneumonia, otitis media, viral febrile illness, acute diarrhea);
- Chronic conditions affecting digestion or metabolism (e.g., celiac disease, malabsorption syndromes, chronic liver disease, chronic kidney disease, diabetes).
- Neurodevelopmental or neurological conditions that impair feeding (e.g., cerebral palsy, autism spectrum disorder, global developmental delay).
- Current or recent use of medications known to alter appetite or digestion/absorption (e.g., systemic corticosteroids, antiepileptics, prolonged antibiotics).
- ... and 7 more (see full listing online)
