

The Study of Efficacy and Safety of Dimephosphon® in Acute Ischemic Stroke

NCT07167550

Status	RECRUITING
Phase	Phase 3
Sponsor	Tatchempharmpreparaty, JSC
Enrollment	184 participants

Key Eligibility Criteria

Inclusion (7)

- Written informed consent was obtained from the patient or their legally authorized representative prior to study participation.
 - Age 35-80.
 - Patients must exhibit neurological manifestations consistent with acute ischemic stroke, with a documented onset-to-intervention interval ranging from 24 to 72 hours at the time of scheduled initial administration of the investigational drug.
 - Verified by CT/MRI current hemispheric ischemic stroke.
 - NIHSS score e5 and d15 at screening.
- ... and 2 more (see full listing online)

Exclusion (12)

- Hemorrhagic stroke or hemorrhagic transformation of ischemic focus, traumatic brain injuries
 - Vertebrobasilar stroke and/or development of acute insufficiency syndromes in the arteries of the vertebrobasilar system
 - A patient with ischemic stroke who is a candidate for reperfusion therapy or who has undergone reperfusion therapy before participation in this study.
 - The presence of anatomical abnormalities of the cerebral vessels (arteriovenous malformations, cavernous malformations, aneurysms, atresia of at least one of the extracranial arteries) according to the anamnesis or CT/MRI data.
 - Progression of neurological symptoms of stroke, defined as an increase in the NIHSS score by 4 points at the second assessment (immediately before randomization) from the value obtained at the first assessment (immediately after signing the informed consent form).
- ... and 7 more (see full listing online)
