

# A Phase 2 Open-label Study to Evaluate the Safety of Larupareti- gene Zovaparvovec Administered Bilaterally in Male Participants With X-Linked Retinitis Pigmentosa

NCT07174726

---

<b>Status</b>	RECRUITING
<b>Phase</b>	Phase 2
<b>Sponsor</b>	Beacon Therapeutics
<b>Enrollment</b>	10 participants

## Key Eligibility Criteria

---

### Inclusion (13)

- Provide written informed consent or assent (per local regulation) prior to the conduct of any study-related procedures. Participants who provide assent must have a parent, guardian, or legal representative provide written informed consent.
- Be between 12 and 50 years of age (inclusive) at the time of providing informed consent and assent (as applicable)
- Be male (XY chromosome) and have at least 1 documented pathogenic or likely pathogenic variant in the RPGR gene, within exons 1-14 and/or ORF15, from an appropriately certified or accredited laboratory
- Have a clinical diagnosis of XLRP
- Be in good general health to withstand subretinal surgery and perioperative medications based on a complete physical examination and results from hematology, chemistry, and coagulation analyses performed at screening

... and 8 more (see full listing online)

### Exclusion (24)

- Have other known disease-causing mutations documented in the participant's medical history or identified through a retinal dystrophy gene panel that, in the opinion of the Investigator, would interfere with the potential therapeutic effect of the study drug or the quality of the assessments
- For participants with herpes simplex virus (HSV):
- Have a history of oral or genital herpes and be unable and/or unwilling to use a prophylactic antiviral medication.
- Have a history of ocular herpes.
- Have active oral or genital herpes or are currently receiving treatment for active HSV infection

... and 19 more (see full listing online)
