

# Assessing Uterine Cancer Risk in Lynch Syndrome Carriers Using Vaginal Self-sampling and a Health Questionnaire

NCT07194551

---

Status	RECRUITING
Phase	Not Applicable
Sponsor	University of British Columbia
Enrollment	30 participants

## Plain Language Summary

---

This study is looking at whether a simple vaginal self-swab test (done at home) combined with a health questionnaire can detect early signs of uterine (endometrial) cancer in women who carry Lynch syndrome — a genetic condition that significantly increases the risk of uterine and other cancers.

**\*\*You may be eligible if...\*\***

- You have been diagnosed with Lynch syndrome confirmed by genetic testing
- You have an intact uterus (no hysterectomy)
- You are 30 years of age or older

**\*\*You may NOT be eligible if...\*\***

- You have a personal history of endometrial (uterine) cancer or endometrial hyperplasia (precancerous thickening of the uterine lining)
- You have had pelvic radiation or an endometrial ablation procedure
- You are currently pregnant or become pregnant during the study

Talk to your doctor to see if this trial is right for you.

## Key Eligibility Criteria

---

### Inclusion (3)

- Diagnosed with Lynch syndrome (confirmed by genetic testing).
- Have an intact uterus.
- Age 30 years or older.

### Exclusion (3)

- History of endometrial cancer or endometrial hyperplasia.
- History of pelvic radiation or endometrial ablation.
- Pregnant at the time of study enrolment or during the study.
