

Relationship Between Swallowing Dynamics and Suprahyoid Muscle Activity in Sarcopenic Dysphagia

NCT07198568

Status RECRUITING
Sponsor Inha University Hospital
Enrollment 50 participants

Key Eligibility Criteria

Inclusion (3)

- years of age or older who underwent VFSS to evaluate the presence of dysphagia
- Patient who diagnosed with sarcopenia based on the cutoff values of the Asian Working Group for Sarcopenia (AWGS) 2019
- Cognitive ability to follow instructions for Videofluoroscopic swallowing study, surface electromyography.

Exclusion (8)

- History of cerebral hemorrhage or cerebral infarction
- History of neuromuscular diseases that could lead to dysphagia such as Parkinson's disease, amyotrophic lateral sclerosis, Guillain-Barre disease
- History of Tracheostomy
- History of oropharyngeal cancer
- History of esophageal structural disease that could lead to dysphagia
- ... and 3 more (see full listing online)
