

Cantharidin Application in Patients With Common Warts (Verruca Vulgaris) (COVE-2)

NCT07246590

Status	RECRUITING
Phase	Phase 3
Sponsor	Verrica Pharmaceuticals Inc.
Enrollment	300 participants

Key Eligibility Criteria

Inclusion (13)

- Candidates will be included in the study if they:
- Are male or female patients ≥ 2 years of age.
- Are immunocompetent.
- Have a minimum of 1 treatable common wart (verruca vulgaris) of any size and height:
- Common warts are considered treatable if they are located anywhere on the body, except for the following excluded areas: the eye area (including eyelids), lips, oral cavity, nasal cavity, inside of the ears, soles of the feet (plantar warts), subungual spaces (ie, under the fingernail or toenail), or the anogenital area (warts within 10 mm of a mucosal surface should not be treated).
- ... and 8 more (see full listing online)

Exclusion (17)

- Candidates will be excluded from the study if they:
- Are unable to cooperate with the requirements or visits of the study, as determined by the Investigator.
- Have any warts present at Baseline in an allowed anatomic location that the subject, parent/guardian, or Investigator is unwilling to treat.
- Plantar warts and external genital warts will not be included in this study, in addition, subungual warts and warts within 10 mm of a mucosal surface will not be included in this study due to their anatomical location and complex treatment modalities.
- Are systemically immunosuppressed or have taken required systemic immunosuppressive or immunomodulatory medication (including oral or parenteral corticosteroids) within 30 days before enrollment or such treatment is planned to be required during the course of the study. Routine use of local (eg, topical, inhaled, intranasal) corticosteroids and episodic use of systemic medications to treat conditions arising during the study is allowed.
- ... and 12 more (see full listing online)
