

# Assessment of the Efficacy and Safety of Injectable TQB2934 (Subcutaneous Injection) in Systemic Light Chain Amyloidosis Patients

NCT07266116

---

Status	RECRUITING
Phase	Phase 1, Phase 2
Sponsor	Shanghai Chia Tai Tianqing Pharmaceutical Technology Development Co., Ltd.
Enrollment	70 participants

## Key Eligibility Criteria

---

### Inclusion (9)

- The subjects voluntarily joined this study, signed the informed consent form, and exhibited good compliance;
- Aged 18 to 75 years old, with an Eastern Cooperative Oncology Group (ECOG) score of 0 to 2, and an expected survival of more than 12 weeks;
- Systemic light chain amyloidosis with diagnostic records (i.e., primary light chain amyloidosis);
- Presence of measurable lesions;
- At least one organ involved;
- ... and 4 more (see full listing online)

### Exclusion (22)

- Diagnosed with other types of amyloidosis, active plasma cell leukemia, multiple myeloma, etc
- Have received allogeneic hematopoietic stem cell transplantation within 1 year prior to the first dose, or have received autologous hematopoietic stem cell transplantation within 12 weeks prior to the first dose;
- Previously received treatment with drugs targeting the same target;
- Within 4 weeks prior to the first dose, the patient has received a cumulative dose of dexamethasone  $>160$  mg or an equivalent dose of other glucocorticoids, or within 3 weeks prior to the first dose, the patient has received targeted therapy, cytotoxic drugs, or any antibody therapy, or within 2 weeks prior to the first dose, the patient has received proteasome inhibitor therapy or radiotherapy, or within 1 week prior to the first dose, the patient has received immunomodulator therapy;
- Those who have received treatment with traditional Chinese patent medicines and simple preparations with clear anti-tumor indications specified in the National Medical Products Administration (NMPA) approved drug instructions within 2 weeks before the first administration;
- ... and 17 more (see full listing online)
