

# Efficacy and Safety of Variceal Embolization Combined With Partial Splenic Artery Embolization for Variceal Bleeding in Cavernous Transformation of Portal Vein.

NCT07310316

---

<b>Status</b>	RECRUITING
<b>Phase</b>	Not Applicable
<b>Sponsor</b>	Air Force Military Medical University, China
<b>Enrollment</b>	26 participants

## Key Eligibility Criteria

---

### Inclusion (6)

- Age 18-75 years;
- Diagnosis of cavernous transformation of the portal vein (CTPV) confirmed by at least one imaging modality (ultrasonography, CT, or MRI);
- Portal vein thrombosis (PVT) extending to the splenic vein (SV) and superior mesenteric vein (SMV);
- History of portal hypertension complicated by variceal bleeding, with recurrent bleeding despite pharmacological and endoscopic therapies;
- Treated with combined variceal embolization and partial splenic artery embolization;
- ... and 1 more (see full listing online)

### Exclusion (2)

- Concomitant malignant tumor;
- Active infection
