

# ATTR Amyloid Cardiomyopathy: Characterization of Extracellular Vesicles as Potential Disease Stratifiers and Prognostic Biomarkers

NCT07314268

---

Status	RECRUITING
Sponsor	University of Sao Paulo General Hospital
Enrollment	70 participants

## Key Eligibility Criteria

---

### Inclusion (4)

- Adult patients aged 18 years or older;
- Confirmed diagnosis of transthyretin cardiac amyloidosis (TTR-CA), with or without myocardial dysfunction, according to established diagnostic criteria;
- Willingness to comply with study procedures and requirements;
- Ability to provide written informed consent.

### Exclusion (2)

- Presence of other significant cardiac conditions that may interfere with study outcomes, such as severe coronary artery disease or major valvular disease;
- Inability to provide informed consent or to participate in the required clinical assessments and examinations.

## Locations (1 total)
