

A Study to Learn How the Body Processes the Study Medicine PF-07328948 in People With Reduced Kidney Function

NCT07315360

Status	RECRUITING
Phase	Phase 1
Sponsor	Pfizer
Enrollment	28 participants

Key Eligibility Criteria

Inclusion (9)

- Male or female of nonchildbearing potential, between the ages of 18 and 80 years, at the screening visit.
 - BMI of 17.5 to 40.0 kg/m² (inclusive), and a total body weight e45 kg (99 lbs).
 - Stable renal function, defined as d25% difference between 2 measurements of eGFR.
 - Group 1 only: at screening, no clinically relevant abnormalities identified by a detailed medical history, physical exam, including blood pressure and pulse rate measurement, ECG and clinical laboratory tests.
 - Group 1 only: normal renal function (mean eGFR e90 mL/min) based on an average of measures from the screening visits.
- ... and 4 more (see full listing online)

Exclusion (16)

- Any condition possibly affecting drug absorption.
 - At screening, a positive result for HIV antibodies.
 - History of renal, liver, or heart transplantation.
 - Urinary incontinence without catheterization.
 - Evidence of a prothrombotic state, including history of deep vein thrombosis, pulmonary embolism, or arterial thrombosis, or known genetic predisposition.
- ... and 11 more (see full listing online)
