

# A Study Evaluating Oral-Health-Related Quality of Life and Treatment Patterns Among Dentin Hypersensitivity Sufferers

NCT07337109

---

**Status** RECRUITING  
**Sponsor** HALEON  
**Enrollment** 375 participants

## Key Eligibility Criteria

---

### Inclusion (6)

- Participant who has provided consent indicating they have been informed of all pertinent aspects of the study.
- All genders who, at the time of screening, are aged more than or equal to ( $\geq$ )18 years.
- Anyone who has begun to experience dentin hypersensitivity (self-reported) within the past three months.
- Anyone who has started to use products to treat their tooth sensitivity within the past three months.
- Participant who is able to independently complete all activities online.

... and 1 more (see full listing online)

### Exclusion (10)

- Anyone who has any chronic health conditions that could impact their participation in this study, such as cancer, mental health disorders, history of serious illness in the last three months, history of substance abuse, or planned surgery during the study period.
- Participant whose sensitivity could be caused by other factors or clinical pathology than DH, as self-reported on the screening questionnaire, which include:
  - Anyone who suffers from tooth cavities, significant gum disease, cracked or fractured teeth, temporomandibular joint disease (TMD), or who has had tooth extractions or fillings within the last three months.
  - Anyone who wears braces (including Invisalign-like appliances) for treatment or dentures (full or partial).
  - Participant who has undergone treatment for periodontal or gum disease within 6 months of screening or is currently undergoing treatment for periodontal or gum disease.

... and 5 more (see full listing online)
