

Fecal Microbiota Transplantation for the Treatment of ICU Delirium

NCT07348471

Status	RECRUITING
Phase	Not Applicable
Sponsor	Union Hospital, Tongji Medical College, Huazhong University of Science and Technology
Enrollment	60 participants

Key Eligibility Criteria

Inclusion (4)

- \. Age e 18 years old, no ethnic or gender restrictions;
- \. CAM-ICU-positive delirium;
- \. Expected ICU stay e 5 days after inclusion in the study;
- \. Signed written informed consent.

Exclusion (14)

- \. Routine administration of antipsychotic medications: Conventional antipsychotic therapy refers to the daily ingestion or application of any sustained-release formulation (in any dosage form) of antipsychotic drugs with the ATC code N05A (in any form), including the following agents:
 - Typical antipsychotics: Chlorprothixene, Flupentixol, Haloperidol, Levomepromazine, Loxapine, Melperone, Perphenazine, Pericyazine, Pimozide, Prochlorperazine, Zuclopenthixol, Pimavanserin, Sulpiride.
 - Atypical antipsychotics: Amisulpride, Aripiprazole, Asenapine, Clozapine, Lurasidone, Olanzapine, Paliperidone, Quetiapine, Risperidone, Sertindole, Ziprasidone. However, the non-habitual administration of antipsychotic medications in the general ward prior to the patient's ICU admission (e.g., for the management of delirium) is deemed acceptable. Nevertheless, antipsychotic therapy should be discontinued upon the patient's ICU admission.
 - \. Severe systemic infection in the early stage of resuscitation, hemodynamic instability or insufficient tissue perfusion, and severe imbalance of water, electrolyte and acid-base.
 - \. Patients with a high risk of death within 5 days as judged by the clinician, or those whose treatment decisions are restricted.
- ... and 9 more (see full listing online)
