

Amputations in Childhood and Neuropathic Pain

NCT07401966

Status RECRUITING
Sponsor Hopitaux de Saint-Maurice
Enrollment 50 participants

Key Eligibility Criteria

Inclusion (6)

- Patients aged between 5 and 18 years (inclusive) (Piaget's concrete operational stage to be able to complete the self-assessment questionnaires)
- Patients who underwent amputation before the age of 15 for girls and 16 for boys (average age of completion of lower limb growth)
- Patients who have not undergone surgery on the amputated limb for at least one year (to avoid bias, as any surgery involving incision can cause temporary neuropathic pain unrelated to the amputation)
- Have obtained the signature of the non-objection form by both parents/legal guardians
- Have obtained the child's consent (verbal consent but recorded)

... and 1 more (see full listing online)

Exclusion (6)

- Patients who do not speak French
- Patients whose cognitive abilities are insufficient (as determined by a clinician or reported by parents) to be able to complete self-assessment questionnaires
- Patients undergoing chemotherapy (due to transient neuropathic pain)
- Patients who have received chemotherapy and whose side effects have not yet subsided (on a case-by-case basis depending on the chemotherapy used)
- Patients who have received chemotherapy causing neuropathic pain due to this treatment that has not disappeared.

... and 1 more (see full listing online)

Locations (1 total)
