

Analysis of DR Progression to Identify Risks and Need for Treatment

NCT07417410

Status	RECRUITING
Sponsor	Association for Innovation and Biomedical Research on Light and Image
Enrollment	1,000 participants

Key Eligibility Criteria

Inclusion (4)

- Diagnosed with type 2 diabetes according to the 1985 WHO criteria.
- Age between 35 and 90 years.
- Retrospective visit or referenced patients. For the retrospective visit, a documented follow-up of 1-5 years is required, with at least one clinical visit. For the referenced patients, it is required that they have either diabetic retinopathy at the baseline visit, the presence of at least one cardiovascular risk factor at the baseline visit, or cardiovascular complications at the baseline visit.
- Signed informed consent.

Exclusion (6)

- Previous laser photocoagulation or intravitreal injections (consider if corticosteroids were administered).
- Presence of clinically significant macular edema (CSME) with vision loss or requiring immediate treatment.
- Proliferative diabetic retinopathy.
- Any ocular surgery within the previous 3 months.
- Renal Replacement Therapy (Hemodialysis, Peritoneal Dialysis).
- ... and 1 more (see full listing online)
